Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The sequences were isolated from CDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated
                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Phosphatase; gene therapy; enzyme; cancer; pathophysiological hypoxia; cardiac dysfunction; vascular disorder; myopathy; ectodermal dysplasia; congenital muscle disorder; Papillon-Lefevre syndrome; Cowden disease; Moebius syndrome; Bjornstad syndrome; Bannayan Zonana syndrome; schizophrenia; hamartoma.

                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to phosphatase proteins and coding sequences. The present sequence is one such phosphatase. Phosphatases are enzymes that catalyse the dephosphorylation of proteins modified by phosphorylation of serine, threenine or tyrosine residues. The phosphatases are useful for treating a variety of diseases: for example cancer e.g. breast, urogenital, prostate, head, neck, lung cancers, synovial sarcomas, renal cell cartinoma, non-small cell lung cancer, hepatocellular carcinoma, pancreatic endocrine tumours, stomach cancer, glioblastoma, colorectal cancer and thyroid cancer, pathophysiological hypoxia, cardiac dysfunction and/or vascular disorders, myopathies, congenital muscle disorders, Papillon-Lefevre syndrome, Cowden disease, ectodermal dysplasia, Moebius syndrome, Bionistad syndrome, Bannayan Zonana syndrome, schizophrenia and hamartomas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 QNLTRHFKESIKFIHECRLRGESCLVHCLAGVSRSVTLVIAYIMTVTDFGWEDALHTVRA 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ጵ
                                                                                                                                                                                                                                                                                                               The present sequence is given in a specification providing human dual specificity phosphatase-3 (DSP-3) and a murine DSP-3 variant polypeptide. The polypeptides are useful for dephosphorylating a substrate of DSP-3, e.g. MAP-kinase. They may be used to treat or prevent diseases associated with cell proliferation, immunosuppression, metabolic diseases, or abnormal cell growth or cell cycle abnormalities. They are also useful for identifying agents that modulate their activity. The modulators are useful for treating disorders associated with DSP-3 or DSP-3 variant citivity, e.g. Duchenne muscular dystrophy, cancer, graft-versus-host disease, autoimmune diseases, allergies, metabolic diseases, abnormal cell growth, abnormal cell proliferation and cell cycle abnormalities. The modulating agents are useful for modulating, modifying or altering cellular responses, e.g. in vivo or in vitro cell proliferation,

                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                              9
                                                                                                                                      The present invention provides the protein and coding sequences of the human dual-specificity phosphatase DSP-3. The DSP-3 protein is involved in cell signalling and the sequences can be used in the treatment of cancer, metabolic and autoimmume diseases, allergies, graft-versus-host disease, abnormal cell proliferation and Duchenne muscular dystrophy
                                                        New dual-specificity phosphatase-3 polypeptide and its variants useful for treating disorders associated with DSP-3 activity, defects in cell proliferation, differentiation or survival, e.g. Duchenne muscular dystrophy, cancer.

The invention relates to novel genes (ABL89449-ABL90853) and proteins

(ABB89040-ABB90444) useful for preventing, treating or ameliorating

medical conditions e.g. by protein or gene therapy. The genes are

isolated from a range of human tissues disclosed in the specification.

The nucleic acids, proteins, antibodies and (ant) agonists are useful in

the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and

covarian cancer and other cancers of the adrenal gland, bone, bone marrow,

breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune

disorders e.g. Addison's disease, allergies, autoimmune haemolytic

anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,

multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)

cardiovascular disorders such as myocardial ischaemias; (d) wound healing

cardiovascular disorders such as myocardial ischaemias; (d) wound healing

ci (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)

cardiovascular disorders such as viral, bacterial, fungal and parasitic

infections. Note: The sequence data for this patent did not form part of

the printed specification, but was obtained in electronic format directly

New NOVX polypeptides and nucleic acids, useful for preventing or treating NOVX-associated disorders, e.g. cancer, cardiomyopathy, atherosclerosis, or diabetes, and in chromosome mapping, tissue typing or pharmacogenomics.

WPI; 2002-706998/76.

Disclosure; SEQ ID NO 428; 1498pp; English

This invention relates to a novel nucleic acids, and encoded polypeptides

corphysiological responses in a cell, tissue, organ or organism.

Corphysiological responses in a cell, tissue, organ or organism.

Corphysiological responses in a cell, tissue, organ or organism.

Consider and prognostic assays and furthermore in the treatment of diverse pathological conditions. The present invention describes novel human and murine NOVX proteins, as well as methods to modulate their expression using antisense oligos, ribozymes and peptide nucleic acids.

The NOVX polypeptides, polymucleotides and antibodies are useful in treating or preventing NOVX-associated disorders, e.g. cardiomyopathy, atherical cancer and diabetes. Purthermore, they may be used in treating or preventing diseases such as inflammation, autoimmune treating or preventing diseases such as inflammation, autoimmune treating or preventing diseases such as inflammation, autoimmune and inflammation, autoimmune and inflammation, autoimmune and inflammation, are inflammation, are inflammation, are inflammation, are inflammation, and epilepsy, these molecules have many activities including cytostatic, cardiant, antimidiabetic, antiarteriosclerotic, antiallergic, hemostatic, cardiant, antidiabetic, antiarteriosclerotic, antiallergic, cardiant, antidiabetic, antiallergic, antiallergic, antiallergic, antiallergic, antidiate and anticonvulsant. In addition, they are useful in acreening assays to identify small molecules that modulate or inhibit, for example, cardiant, and anticonvulsant. In addition, they are useful in acreening assays to identify small molecules th 9 thereof, which have properties related to the stimulation of biochemical 1 MGNGMNKILPGLYIGNFKDARDAEQLSKNKVTHILSVHDSARPMLEGVKYLCIPAADSPS 1 MGNGMNKILPGLYIGNFKDARDAEQLSKNKVTHILSVHDSARPMLEGVKYLCIPAADSPS Gарв .. 0 100.0%; Score 975; DB 5; Length 184; 100.0%; Pred. New NOVX polypeptides and nucleic acids, useful for preventing or treating VOX-associated disorders, e.g. cancer, cardiomyopathy, atherosclerosis, or diabetes, and in chromosome mapping, tissue typing or pharmacogenomics.

# Disclosure; SEQ ID NO 696; 1498pp; English.

This invention relates to a novel nucleic acids, and encoded polypeptides thereof, which have properties related to the stimulation of biochemical

```
or physiological responses in a cell, tissue, organ or organism.

Specifically, it refers to the use of biologically active fragments for diagnostic and prognostic assays and furthermore in the treatment of diverse pathological conditions. The present invention describes novel human and murine NOVX proteins, as well as methods to modulate their expression using antisense oligos, ribozymes and peptide nucleic acids. CT human and murine NOVX polypetides, polymucleotides and antibodies are useful in treating or preventing NOVX-associated disorders, e.g. cardiomyopathy, atherosclerosis, cancer and diabetes. Furthermore, they may be used in treating or preventing diseases such as inflammation, autoimmune cdisorders, allergies, blood disorders, acquired immunodeficiency syndrome disorders, allergies, blood disorders, acquired immunodeficiency syndrome contribution, allergies, hosesity, athems, immunoglobulin (Ig)A nephropathy, cirrhosis, arthritis, Alzheimer's disease, infections, stroke, muscular dystrophy, and epilepsy. Accordingly, these molecules have many activities including and epilepsy. Accordingly, these molecules have many activities including cyclostatic, anti-HIV, antidiabetic, antiarteriosclerotic, ancectic, antiasthmatic, nephrotropic, antiartritic, hepatotropic, antiasthmatic, nephrotropic, antiartritic, hepatotropic, antiasthmatic, nephrotropic, antiattritic, hepatotropic, antiasthmatic, nephrotropic, antiattritic, hepatotropic, anticonvolument. In addition, they are useful in screening assays to identify small molecules that modulate or inhibit, for example, neurogenesis, wound healing and angiogenesis. The nucleic acids are also the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        QNLTRHFKESIKFIHECRLRGESCLVHCLAGVSRSVTLVIAYIMTVTDFGWEDALHTVRA 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is the protein sequence of human mitogen-activated protein kinase phosphatase X (MKPX). MKPX is amplified and overexpressed in human cancers, including colon cancer, ovarian cancer and prostate cancer. The MKPX gene, its expressed protein products and antibodies can be used diagnostically or as targets for cancer therapy or vaccine. They diagnosts, prevention and therapy, and for determining the efficacy of a therapeutic treatment regimen in a patient. A claimed method of blocking in vivo expression of the gene involves administering a vector encoding MKPX small interfering RNA (siRNA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MGNGMNKILPGLYIGNFKDARDAEQLSKNKVTHILSVHDSARPMLEGVKYLCIPAADSPS 60

The present internation described an instruct associated phosphatase function; contained acade. Also described: (1) a method of screening for biologically active agents that modulate a cancer associated phosphatase function; (2) a method for the diagnosis of cancer; (3) a method for inhibiting the associated phosphatase, where the targets are associated with signal transduction in cancer cells; (5) a compound (C) for the treatment of a tumour; (6) a composition for the treatment of a tumour; (7) a composition for the treatment of a tumour comprising a pharmacoutical carrier and (C); (7) methods for treating a tumour; and (8) a method for visualising a tumour in a patient. A cancer associated phosphatase of the present invention has cytostatic, immunosuppressive, antidiabetic, neuroprotective, antirhelamatory, vulnerary, antidiabetic, antiarteriosclerotic, antininismmentic, antistreriosclerotic, antininismment of activities. The cancer associated phosphatases and nucleic acids encoding the proteins are useful for visualising tumours in patients or diagnosing and treating cancer, e.g. phosphatases and nucleic acids encoding the proteins are useful for visualising tumours in patients or diagnosing and treating cancer, e.g. pancreas, lung, ovarian, liver or colon cancer. The polypeptides and nucleic acids may also be used for treating hyperproliferative diseases, such as autoimmune disease, diabetes mellitus, multiple sclerosis, cheumatoid arthritis, psoriasis, atherosclerosis, multiple sclerosis, cheumatoid arthritis, psoriasis, atterating careening pharmaceutical agents that inhibit the growth or metestasis of tumour cells. The present equence represents that inhibit the prowth or metestasis of tumour cells. The present equence represents that inhibit the prowth or metestasis of tumour cells. The present equence is equenced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ONLTRHFKESIKFIHECRLRGESCLVHCLAGVSRSVTLVIAYIMTVTDFGWEDALHTVRA 120

PRO polypeptide SEQ ID NO:2179.

```
polynucleotides capable of interfering with expression of a polypeptide having protein-tyrosine-phosphatase (PTP) activity. The products of the invention have cytostatic, immunomodulator, antimicrobial, antifinamatory, antidiabetic and anorectic activity. The methods and compositions of the present invention are useful for treating diseases or conditions associated with aberrant expression or activity of the protein tyrosine phosphatase, such as cancer, autoimmune diseases, infection, inflammation, diabetes and obsetty. This sequence represents a siRNA directed against dual specificity phosphatase (DSP) expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated small interfering RNA (siRNA) polynucleotide useful for treating diseases with aberrant activity of the protein tyrosine phosphatase, such as cancer, autoimmune disease, infection, inflammation, diabetes and obesity.

The invention relaters to a novel isolated interest and the fact antidiabetic, dermatological, antipsoriation has antidiabetic, dermatological, antipsoriatic, antidalergic, antidatheric, and respiratory activity. A polymuclectide of the invention may have a use in gene therapy. The PRO polypeptide, its agonist, antidatory tast specifically binds to the polypeptide is useful for treating an immune related disorder such as systemic architists, as spondyloarthropathy, systemic selerosis, an idiopathic inflammatory myopathy, Sjogren's syntemic selerosis, andidopathic inflammatory myopathy, Sjogren's syntemic selerosis, antidiamatory myopathy, Mipplet, immune-mediated renal disease, a demyellnating polyneuropathy, dillain-Barre syndrome, system, idiopathic demyellnating polyneuropathy, dillain-Barre syndrome, chronic inflammatory demyellnating polyneuropathy, dillain-Barre syndrome, a chronic inflammatory demyellnating polyneuropathy, dillain-Barre syndrome, inflammatory bowel disease of the central or peripheral nervous chiesase, infectious or autoimmune chronic active hepatitis, primary chilary cirrhosis, granulomatous hepatitis, sclerosing cholangits, inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's chilary cirrhosis, granulomatous hepatitis, sclerosing cholangits, disease, arthma, allergic rhinitis, atopic dermatitis, food hypersensitivity, urticaria, an immunologic disease, grath, rejection or contact dermatitis, processes as thus, idiopathic pulmonary fibrosis, gratt rejection or graft-versus-host disease. The present sequence represents a PRO protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 QNLTRHFKESIKFIHECRLRGESCLVHCLAGVSRSVTLVIAYIMTVTDFGWEDALHTVRA 120

                                                                                                                                                                                                    à
                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to the isolation of novel human enzyme polypeptides, and the CDNA (AAS40785-AAS41684) and genomic sequences cancer encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. anterior) inflammatory disorders (e.g. arthritis), neurological disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), incroading hyperproliferative disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. inamonophila), reproductive disorders (e.g. inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. Inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. Inflammatory disorders (e.g. infectious disorders (e.g. Inflammatory disorders (e.g. infectious disorders (e.g. Inflammatory movel human enzyme polypeptides of the invention can also be used in gene therapy, AAU22915-AAU23814 represent the novel human enzyme polypeptides of the invention. Note: The sequence the novel human enzyme polypeptides of the invention can also be used in gene therapy and the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

The present invention relates to the isolation of novel human neoplastic disease associated polypeptides, and cDNA (AAS34767-AAS35050) and DNA sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease such as hyperproliferative conscribility and in liver cancer, childhood cerebellar astrocytoma, or Hodgkin's lymphoma). The sequences of the invention may also be useful for treating other disorders such as neural disorders, immune system contracts, pulmonary disorders, reproductive disorders, immune system disorders, pulmonary disorders, reproductive disorders and renal disorders. The polymucleotide sequences of the invention are also useful in gene therapy. AMU21568-AAW121851 represent the novel human neoplastic for this patent did not form part of the invention. Note: The sequence data contract of the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was contracted polyblished_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel polypeptides and polynucleotides useful as diagnostic reagents to diagnose diseases or disorders associated with aberrant expression or activity of polypeptides, and for treating cancers, rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 11; SEQ ID NO 395; 687pp; English.

The present invention relates to the isolation of novel human neoplastic disease associated polypeptides, and cDNA (AAS34767-AAS35050) and DNA sequences encoding for these polypeptides. The sequences of the invention sequences of the invention disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease such as hyperproliferative closers (e.g. leukaemia, bone cancer, bladder cancer, brain stem glioma, adult liver cancer, childhood cerebellar astrocytoma, or Hodgkin's lymphoma). The sequences of the invention may also be useful for treating other disorders such as neural disorders, immune system disorders, muscular disorders, reproductive disorders and renal disorders. The polymucleotide sequences of the invention are also useful in gene therapy. AAUS1568-AAUS1851 represent the novel human neoplastic for this patent did not form part of the printed specification, but was for the invention in the mass of the invention are also useful contained in electronic form part of the printed specification, but was contained in electronic formet directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel polypeptides and polynucleotides useful as diagnostic reagents to diagnose diseases or disorders associated with aberrant expression or activity of polypeptides, and for treating cancers, rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ftp.wipo.int/pub/published_pct_sequences
